DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Steimann et al (5,476,748).

Steimann et al disclose a UV sensitive composition comprising an epoxy resin (40-80%), a cationic photoinitiator, a diacrylate (5-40%), a radical photoinitiator, and a hydroxyl-containing compound (5-40%) useful in making 3-dimensional objects. The examples of the above cited compounds, meet the instant claim limitations. The process of forming a pattern employing the resin includes the coating the composition onto a substrate, exposing the layer using UV light at an exposure energy of between 40 and 320 mJ/cm, and the process is repeated to form several patterned layers.

With respect to the claimed properties (elongation at yield, tensile modulus, average elongation, a yield stress), while the reference provides data for some which fall within the scope of the instant claim limitations, it is the position of the examiner, that given that the reference material comprises the same materials, and is employed in the same process, that the material would inherently meet all of the limitations of the instant claims.
